1. Download all the data in this folder https://drive.google.com/open? id=1Z4TyI7FcFVEx8qdl4j09qxvxaqLSqoEu. it contains two file both images and labels. The label file list the images and their categories in the following format:

#### path/to/the/image.tif,category

where the categories are numbered 0 to 15, in the following order:

- 0 letter
- 1 form
- 2 email
- 3 handwritten
- 4 advertisement
- 5 scientific report
- 6 scientific publication
- 7 specification
- 8 file folder
- 9 news article
- 10 budget
- 11 invoice
- 12 presentation
- 13 questionnaire
- 14 resume
- 15 memo
- 2. On this image data, you have to train 3 types of models as given below. You have to split the data into Train and Validation data.
- 3. Try not to load all the images into memory, use the gernarators that we have given the r eference notebooks to load the batch of images only during the train data. or you can use this method also

 $\underline{\texttt{https://medium.com/@vijayabhaskar96/tutorial-on-keras-imagedatagenerator-with-flow-from-dataframe-8bd5776e45c1}$ 

https://medium.com/@vijavabhaskar96/tutorial-on-keras-flow-from-dataframe-1fd4493d237c

- 4. You are free to choose Learning rate, optimizer, loss function, image augmentation, any hyperparameters. but you have to use the same architechture what we are asking below.
- 5. Use tensorboard for every model and analyse your gradients. (you need to upload the screenshots for each model for evaluation)

Note: fit\_genarator() method will have problems with the tensorboard histograms, try to deb ug it, if you could not do use histgrams=0 i.e don't include histograms, check the documentation of tensorboard for more information.

6. You can check about Transfer Learning in this link - <a href="https://blog.keras.io/building-powerful-image-classification-models-using-very-little-data.html">https://blog.keras.io/building-powerful-image-classification-models-using-very-little-data.html</a>

# Model-1

- 1. Use  $\underline{\text{VGG-}16}$  pretrained network without Fully Connected layers and initilize all the weights with Imagenet trained weights.
- 2. After VGG-16 network without FC layers, add a new Conv block ( 1 Conv layer and 1 Maxpooling ), 2 FC layers and a output layer to classify 16 classes. You are free to choose any hyperparameters/parameters of conv block, FC layers, output layer.
- 3. Final architecture will be INPUT --> VGG-16 without Top layers(FC) --> Conv Layer --> Max pool Layer --> 2 FC layers --> Output Layer
- 4. Train only new Conv block, FC layers, output layer. Don't train the VGG-16 network.

[·]

#### Model-2

- 1. Use  $\underline{\text{VGG-16}}$  pretrained network without Fully Connected layers and initilize all the weights with Imagenet trained weights.
- 2. After VGG-16 network without FC layers, don't use FC layers, use conv layers only as Fully connected layer. any FC layer can be converted to a CONV layer. This conversion will reduce the No of Trainable parameters in FC layers. For example, an FC layer with K=4096 that is looking at some input volume of size  $7 \times 7 \times 512$  can be equivalently expressed as a CONV layer with F=7,P=0,S=1,K=4096. In other words, we are setting the filter size to be exactly the size of the input volume, and hence the output will simply be  $1 \times 1 \times 4096$  since only a single depth column "fits" across the input volume, giving identical result as the initial FC layer. You can refer this link to better understanding of using Conv layer in place of fully connected layers.
- 3. Final architecture will be VGG-16 without FC layers(without top), 2 Conv layers identical to FC layers, 1 output layer for 16 class classification. INPUT --> VGG-16 without Top layers(FC) --> 2 Conv Layers identical to FC --> Output Layer
- 3. Train only last 2 Conv layers identical to FC layers, 1 output layer. Don't train the VG G-16 network.

### Model-3

1. Use same network as Model-2 'INPUT --> VGG-16 without Top layers(FC) --> 2 Conv Layers i dentical to FC --> Output Layer' and train only Last 6 Layers of VGG-16 network, 2 Conv layers identical to FC layers, 1 output layer.
